Daikin customizes packaged line-up of airconditioning products for Indian market.

Daikin believes in being close to its customers. As a result we have developed a new range of packaged products tailor-made for Indian conditions. This new line-up of products produced in Daikin India's manufacturing facility at Neemrana, Rajasthan ensures reduced lead time and greater array of features for Indian consumers. Advanced features include cooling at high-ambient temperature, Under voltage & over voltage protection as well as phase imbalance voltage &

Phase reversal protection. We have also introduced aesthetically appealing new wired LCD remote controller, with glossy finish, for ease of usage of our packaged air-conditioner. The new line-up of packaged air conditioners gives you cutting-edge technology in air conditioners with industry-leading energy efficiency for lower power bills. These locally produced high-static pressure duct type are available up to 20 HP (16.7 TR).

R-410A FDR-FRV/FRY Series
R-22 FD-DSV/DSY Series

▶ FDR65FRV16

▶ FDR100FRV16

▶ FDR130FRV162*

▶ FDR200FRY16

Improved Features

New wired LCD remote controller

New LCD based wired type remote handset with alphabetic error display like HP, LP, SPPR, indoor fan current sensor etc. In-built energy saver dedicated button and glossy finish.

High performance even at high ambient temperature

Always keeping your comfort in mind, Daikin ducted air conditioners work at high ambient temperature (48°C) without tripping. Get the best out of Daikin ducted air conditioners even in hot weather conditions.

Note: *Available in twin circuit also. **Models available in R-22 also (5.5 ~ 16.7 TR).

Best in class Air Conditioning Components

Best in Class high grade Components of Daikin Ducted Air Conditioners ensures high energy efficiency, High Cooling, high comfort and high reliability.

Under voltage and over voltage protection

Given the erratic electricity supply it becomes important that your air conditioners are guarded against under voltage and over voltage. Daikin ducted air conditioners offer protection against voltage fluctuation thus enhancing the operating life of your air conditioners.

Phase imbalance voltage

It is vital that your air conditioner is protected against imbalance and Daikin duct air conditioners offer this protection to ensure reliable operation of the air conditioner. Electrical equipment especially motors and their controllers will not operate reliably on unbalanced voltages. Greater imbalances may cause overheating of components and damage the air conditioners.

Phase Loss Protection

In case of any phase loss Daikin machine will display error on its controller.

Phase reverse protection

Phase reversal could cause serious problems therefore much care is required to protect the motor from such type of fault. Daikin duct air conditioners offer protection from phase reversal thus enhancing the life of the air conditioners.

Pre-charged refrigerant

Daikin India's FDR65, FDR100, FDR130 and FDR200 models are available with pre-charged refrigerant for 7.5 meter piping length. No need for additional refrigerant charge on-site if piping length is upto 7.5 meters.

Comfortable

Superior air distribution for comfortable living

The conditioned air can be effectively distributed to every corner of the room through the ducting and this ensures a pleasant environment for comfortable living.

Air discharge orientation

FDR65-200 models come with standard horizontal air discharge.

Flexibility of air supply

Air flow can be adjusted by using Fan speed button on LCD Remote controller.

Versatility

Multiple rooms can be cooled together at the same time by using just one unit of fan coil unit.

Fresh air intake for healthy living

Fresh air can be introduced into the building through the design of fresh air intakes. This will help to improve the indoor air quality.

Compact

Compact design of built-in type helps blend with interior decor

Indoor models are compact in size and designed with twin coil structure. This design effectively saves space during installation.

Compact size

To fit in tight ceiling spaces, few models are available with 450 mm height only

Work & Servicing

Easy maintenance

The simple design concept has provided the ease of maintenance and servicing. Access to the internal part of the unit can be from the service panel or other side of the unit by loosening a few screws.

Remote Controller

Wireless & Wired Remote Controllers

NEW

*4P408280-1A

*Applicable models upto FDR200

Others

Air Filter as standard

Washable Air Filter is equipped as standard.

Outdoor Unit

Scroll compressor

All outdoor units are using scroll compressor which has better energy efficiency and quiet in operation.

Anti-corrosion of heat exchanger fin

The heat exchanger fin of outdoor units are anti-corrosion treated.

Scroll compressor

Advantage of High Performance Components FDR-FRV Series (5.5TR~16.5TR)

Compressor

Compressor is known as heart of any Refrigeration & Air conditioning system.

Daikin uses highly efficient Scroll compressor which ensures better Volumetric Efficiency, Low noise ,reliable operation, built in safety.

ODU Fan

Aerodynamic design High efficiency Propeller Fan for optimize Airflow distribution thus better heat transfer& lower noise level best suited for high Ambient conditions.

The Outdoor fan and fins that act as heat syncs draw the heat away so the unit doesn't overheat.

The outdoor condensing unit becomes very hot with all that overheated refrigerant running through it. The Outdoor fan and fins that act as heat syncs draw the heat away so the unit doesn't overheat.

Motor

High RPM motors to improve airflow ,better insulation

Thermal Overload protector used for motor safety.

HP/LP Switch

These switches are design for Highly Precise Setting & Repeatability

HP Switch: The high pressure switch cuts-off power supply in case of excess compressor discharge pressure thereby preventing equipment damage.

LP Switch: The low pressure switch monitors the refrigeration system for loss of refrigerant charge.

It also helps in stopping the evaporator (indoor) coil from freezing due to a clogged/dirty filter or lower airflow over the coil.

Heat Exchanger

Blue Fin Condenser and Hydrophilic special coating on the fin of the heat exchanger prevents corrosion, extending the life of the unit to increased enhance performance.

Optimum Area Heat exchanger of both 7mm tubes & 3/8" Heat Exchanger increasing heat transfer area which increases cooling capacity & Performance during high ambient temperature.

TEV

Thermostatic expansion valve (TEV) regulates refrigerant flow to cater to variations in heat load and make the system more efficient by controlling Superheat & matches system capacity.

over a broader temperature range. It increases the flow of refrigerant to provide better cooling at higher temperatures. It's design Protects the compressor motor by preventing liquid slugging, which can damage compressors.

Drier

Filter Drier for liquid line protects refrigeration and air-conditioning system by removing High moisture, acids and solid particles. With these contaminants eliminated, systems are safer from harmful chemical reactions. These are shock resistant built in steel shell construction.

Stop Service Valve

Function: Stop valve is used to connect indoor and outdoor units.
Good Quality of stop Valve ensures high Reliability.

Metallic PCB Box

Metallic PCB Box ensures safety from Fire

Air-Cooled (Packaged)

AIR CONDITIONERS - Flexible design and great reliability.

Remote controller	BRC1NU64	

Notes: 1. Wiring modification is needed on floor stand model to connect with central control ADP kit.

2. Need to use central control adapter kit for option connection.

3. Central control adapter kit and LCD remote controller is necessary for option connection.

Quiet Operation

Equipped with scroll compressor for quiet operation
Smooth running, low vibration, low operating sound.

Outdoor unit	Sound level	
	0.92	1.76
RUR05NY1	59 dB	60 dB
RUR06NY1	59 dB	60 dB

Direct Air Blow from Indoor Unit with Plenum

Comfortable factory airconditioning, using multiple indoor units installed in accordance with the space.

Installation is next to walls, so units will not affect the factory layout even if some changes are made.

Direct air blow type

Air Blow via Connected Ducts

Comfortable airconditioning of the entire factory by connecting a blow duct at the top of the indoor unit.

Duct connection type

Note: Ducts to be procured locally.

Easy Operation

Digital remote control comes standard with indoor unit

Temperature setting is possible by button operation. The set temperature is conveniently displayed on the LED.

Floor standing type (Standard accessory)

- 1 On/Off button
- 2 Fan button
- 3 Temp. setting up
- 4 Temp. setting down
- 5 Mode button
- 6 LED display
- 7 Compressor operation lamp
- 8 Fan operation lamp
- 9 Cool operation lamp

Note 1: It cannot be used for FVPGR10-20NY1

Duct type (Optional accessory)

- 1 Power
- 2 Temperature scale
- 3 Temperature setting
- 4 Mode setting
- 5 Next setting
- 6 Fan indicator lamp
- 7 Cool indicator lamp
- 8 Compressor 2 indicator lamp
- 9 Compressor 1 indicator lamp
- 10 Temperature sensor

Design Flexibility

Designed for long refrigerant piping

50m maximum length and 30m maximum level difference to cover medium and large-scale building needs.

Outdoor unit roof installation possible for plenty of leeway

Refrigerant pre-charged for upto 7.5 metres

Allowable refrigerant pipe length and level difference

	Pre-charged ¹	Max. length	Max. level difference
RUR05NY1-20NY1	7.5 m	50 m (Equivalent length 70 m)	30 m

Note 1: Additional refrigerant charging is required if the refrigerant pipe is longer than the indicated length.

4-direction piping affords more freedom of layout (Applies to RUR05N/06N)

Piping can be run from the front, bottom, right or rear surface according to how the unit is installed.

In case of RUR08-20N, piping can be drawn out in two directions - front and under side.

Durability

Heat exchange fins provided with anti-corrosion treatment (Applies to all outdoor units)

To achieve increased durability by improved resistance to salt corrosion and atmospheric pollution, coated PE fins (with special acrylic pretreatment) are used for the heat exchanger of the outdoor unit.

Space Savings

Installation space is saved, thanks to a more compact outdoor unit. This also makes it easier to install.

▶ Previous 20HP outdoor unit
RUG10AU1 X 2

53%

Space saved compared to previous model

Air-Cooled (Rooftop)

AIR CONDITIONERS - The Comfort with Higher Efficiency.

Rooftop

R-410A

▶ UATQ60/90/120/150/300/180/240CGXY1 (Cooling Only)

▶ UATYQ250/350/450/550/600/700MCY1 (Heat Pump)

▶ With optional economiser kit*

Package Unit

Daikin's new range of rooftop packaged units has been developed specifically to suit commercial applications and are designed to be easy to install, requiring only ducting (and associated fittings), power/control wiring and drain piping. Along with the light grey colour, the flat top and compact design gives an aesthetic and neat appearance when installed in line of sight. The unit cabinet is made of powder coated sheet metal especially suitable for outdoor use. All parts of the structure are fastened with corrosion resistant screws and bolts.

High Operating Range

Designed for high ambient application. Continuous operation at an outdoor ambient temperature up to 52°C.

Flexible Air Supply utilising Variable Pitch Pulley

Utilising the Variable Pitch Pulley (VPP) driven supply fan, VPP can be adjusted on site to meet a wide range of required air flow and ESP without the need to change the pulley and belt.

Convertible Return and Supply Air*

Unit can be easily converted from horizontal to vertical (downward) supply and return air duct configuration by relocating the panels and supply air fan mounting.

Scroll Compressor

Units are equipped with high efficiency and reliable scroll compressors. Each compressor is mounted on rubber vibration isolators in order to reduce the noise level and vibration transmissions.

Powder Coated Condensate Drain Pan

The sheet metal condensate drain pan is powder coated to resist corrosion.

Slots for 2 Inch Return Air Filters

A 2 inch rail is provided as standard in instances where a field supplied filter casement needs to be installed.

Higher Energy Efficiency Rating

The UATQ-C series is designed to achieve high energy savings. Its performance is claimed to be among the best in the market.

*Selected models (Refer data book)

Standard Handset

User friendly wired remote controller for UATQ-C series with following functions:

- 7 days programmable timer (on/off)
- Compressor running display
- Real time clock
- Key lock function
- Energy saving mode
- Error code display

Rooftop Panel for UATYQ - MCY1 series comprises all starting, operating and safety controls setting.

- 7 days programmable timer with 3 set of ON/OFF, timer/day
- Dirty filter indication
- Alarm & Warning diagnostic
- Password protection for advanced setting

Component Features

1 Condenser Fan and Motor

Fans are of propeller type, direct driven by weatherproof electrical induction motors. Condenser fan motor has class F insulation and splash-proof enclosure of up to IP55*.

- UATQ60/90/120/150/180/210/240/300CGXY1: IP55
- UATYQ600/700MCY1: IP55
- UATYQ250/350/450/550MCY1: IP44

2 Condenser

Condenser coils are manufactured from seamless inner grooved copper tubes mechanically bonded to Aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig. All standard coils are up to 3 rows/14-16 FPI, 3/8" (9.52mm) O.D. tubes.

UltraGold Fin is offered as standard (1000hrs Salt Spray Tested), which has longer life span under corrosive environment.

3 Casing / Structure

The unit casing used in UATQ-C & UATYQ-MCY1 series is made of zinc coated galvanized steel sheets. It is further coated with an electrostatic powder coat and then oven-baked for a tough and lasting weather resistant finish. Zinc plated screws are used throughout to further reduce possibility of unit rusting.

4 Evaporator

Evaporator coils are manufactured from seamless inner grooved copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All coils are tested against by Nitrogen holding at 609psig and highly precise Helium leak test at 235psig. All standard coils are 3-4 rows/14-16 FPI, 3/8" (9.52mm) O.D. tubes.

UltraGold Fin is offered as standard (1000hrs Salt Spray Tested), which has longer life span under corrosive environment.

5 Insulation

All possible areas of condensation are insulated by PE, Polythelene. Panel insulation is 10mm thick while drain pan insulation is 5mm thick.

6 Evaporator Fan and Drive

Blower is DWDI centrifugal, forward curved type. It is mechanically and dynamically balanced and mounted on a rigid shaft in a self aligned bearing

block. The motor is fitted with an adjustable V-belt drive as standard. It has class B insulation and dripping water proof, IP22.

7 Expansion Device

Electronic Expansion Valve is used to ensure accurate control of refrigerant flow.

8 Compressor

Compressor used in UATQ-C & UATYQ-MCY1 Series Packaged Units are hermetically sealed scroll type. All the compressors are provided with an internal overload protection.

9 Refrigerant Circuit

Each refrigerant circuit have independent electronic expansion devices, HP/LP switch and refrigerant line service pressure ports as standard factory HP/LP switch and refrigerant line service pressure ports as standard factory installed.

Economiser*

Economiser is available as an option to cater for horizontal or vertical air discharge/return.

▶ Horizontal Discharge / Return

▶ Vertical Discharge / Return

Optional Features

3rd Party Thermostat*

For application that requires uniform thermostat outlook with other electrical appliances. 3rd Party thermostat can be connected to the factory supplied module via the contact point available on the PCB board.

Basic BMS Connection

Unit's standard PCB board provides dry contact for basic BMS connection. Input signal will go to dry contact ON/OFF, COOL/HEAT and 4 to 20 mA temperature adjuster while output signal will come from ON/OFF, COOL/HEAT, ALARM and DEFROST dry contact.

CO₂ Sensor*

Field specified CO₂ sensor can be easily plugged on the control board's dry contact, which is available on the economiser extension board.

Auxiliary Heater*

Auxiliary heater connection point is available on the standard PCB for field supplied heater connection.

*Combination possible only with R-410A Heat Pump rooftop unit

Horizontal Water Source Heat Pump

► MWH-D

Energy saving and environmental protection

Pioneer of Environmental Protection

Water source heat pump MWH-D series use environmental refrigerant R410A. R410A is higher volumetric capacity, w/o element of Cl, improving the efficiency, not destroying the ozone layer.

Refrigerant	ODP	Temperature slip	Volumetric capacity	Efficiency
R410A	0	0.5	141	100
R407C	0	4.4	95	98
R22	0.05	0	100	100

Notes:
 ■ ODP is a relative value of R11
 ■ Volumetric capacity and efficiency are relative value of R22

High Efficiency and Energy Saving

At present, McQuay measures ACOP instead of COP to identify water source heat pump efficiency. ACOP is Integrated cooling and heating Coefficient of Performance for the whole year. The highest ACOP is 4.94, for MWH060DRP, which is higher beyond national standard (GB) 4.55.

$$ACOP = 0.56 * EER + 0.44 * COP$$

EER = cooling capacity/cooling input power,

COP = heating capacity/heating input power.

► This test room is Nationally Recognized Testing Laboratory

Reproducible Energy Sources

The MWH D series take use of ground water, surface water, ground and other resource which include low-quality energy which is renewable energy sources.

The unit can be applied to water loop system, water source system, ground water system or other water system due to wide-range working condition.

Flexible application

Flexibility in Static Pressure Selection

McQuay MWH-D series (1HP-7HP) take use of high-performance fan motor. For 8HP-15HP units, 4 types of ESP option is provided to meet air supply requirement.

► 1HP-7HP

Easy Maintenance

MWH-D series are designed with assess doors and knobs in three directions, which is easier for service engineers to change parts on site.

Convenient Installation

MWH-D series have charged refrigerant R410A before shipment. Customers only need to wiring, install water pipes and air ducts on job site. So installation cost is highly reduced.

With full accessories

Standard MWH-D series come along with accessories including: wired controller, 8m communication cable, moldproof air filter and waterpipe joint and rubber isolator make installation more convenient and easier.

Safety & Reliability

Multiple Protections

MWH-D series are designed with multiple protections: the high and low pressure protection, water leakage protection and circulating water temperature protection. The wired controller is installed with sound, light and code alarm, which feedback fault information fastly to make sure formal operation.

No Refrigerant Liquid Attack

MWH-D series are designed with liquid accumulator which can store redundant refrigerant when operation condition changes so that to prevent compressor from liquid attack.

Scroll

Liquid Accumulator

Superior IAQ

MWH-D series standard filters are washable to ensure the coil clean and run efficiently, to provide clean indoor air continuously.

Intelligent Control System

Intelligent Control System

MWH-D series adapt various ways of control, including standard wired controller(MC322) and other options, for example: wireless remote card controller, central controller (max to 64 units), Smart Commander and supporting BMS system under Modbus.

▶ Wired Controller (MC322+8m wiring) (Standard)

▶ Wireless Card Type (Optional)

▶ Centralized Controller (Optional)

▶ Modbus (Optional)

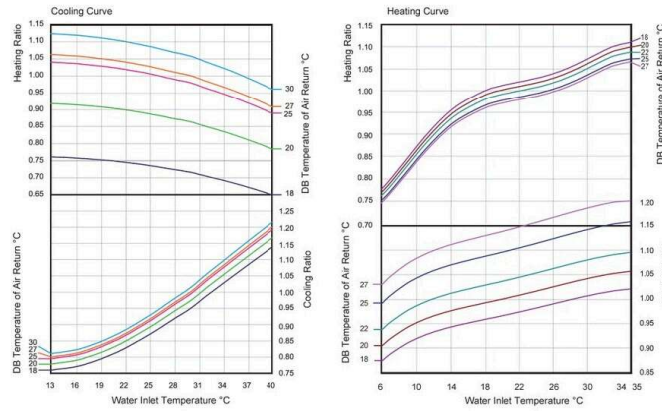

▶ Smart Commander Software (Optional)

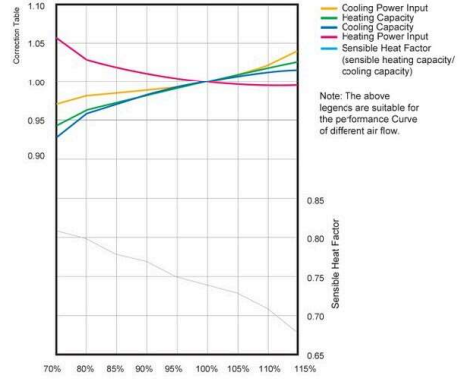

Note: For above option, please contact factory in advance

Performance Curve

Different Conditions

Different Air Flow

Note: The performance curve of different conditions is tested on normal water flow.

Correction Table of Water Temperature Difference

Water Inlet/Outlet Temperature Difference	10	9	8	7	6	5	4
Water Flow	0.500	0.560	0.620	0.720	0.840	1.000	1.130
Cooling Capacity	0.986	0.990	0.994	0.997	0.999	1.000	1.001
Heating Capacity	0.978	0.984	0.990	0.997	1.001	1.000	0.994
Cooling Power Input	1.043	1.034	1.025	1.016	1.008	1.000	0.989
Heating Power Input	0.989	0.992	0.994	0.996	0.998	1.000	1.004

Note: specification is based on 30°C water inlet temperature, 27°C (DB) air return temperature.

Operating Range

Operating Range	Cooling	Heating
Indoor Air DB Temperature	16—35°C	10—30°C
Cooling Capacity	13—40°C	6—35°C

Note: If the units run beyond above operating limit, it may cause damage to the units.

- Notes:
- Specifications will be subjected to change by manufacturer without prior notice.
 - Cooling capacity is based on 27°C (DB), 19°C (WB) air inlet temperature and 30°C water inlet temperature, 35°C water outlet temperature.
 - Heating capacity is based on 20°C (DB), 15°C (WB) air inlet temperature and 20°C water inlet temperature.
